"Site-directed mutational analysis of a membrane guanylate cyclase to convariant the attial natruretic factor signaling site.";

Proc. Natl. Acad. Sci. U.S.A. 88:7882-7886(1991).

C-1- FUNCTION: RECEPPOR FOR ATRIAL NATRURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANF.

C-1- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

C-1- SUBCELLULAR LOCATION: Type I membrane protein.

C-1- SUBCELLULAR LOCATION: Type I membrane protein.

C-1- SUBCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWO WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND ONE (ANP-C) COMPICE OF AND SIBLE FOR THE CLEARANCE OF ANP FROM THE CICALATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.

C-1- SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC DOMAIN OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

Inis sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the Sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, growth hormone secretory disease, hyper- and polyphagia, CC syndrome, stitzophance of consciousness, anxiety syndrome, schizophrenia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, conversibility syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, CC conjogalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting XX

It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease,
Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; co caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of G protein-coupled receptor ligands - for modulating pr secretion or placental function, e.g. for treating menopausal

The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, terrine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                Disclosure;

                                                                                                                            The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, plamentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

This ligand could have specific applications as a modulator this ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper-and polyphagia, CC trauma, growth hormone secretory disease, hyper-and polyphagia, CC hyperprolactinaemia, disbetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, disbetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

The present sequence is a peptide used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence describes a method of controlling the secretion corticotrophin releasing hormone (CRH), involving the use of a G protraceptor ligand. This can be used to control the secretion of CRH and useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-NOV-1999;

                                      The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyseste or for treating, preventing or mmeliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hyperadrenocorticism, Addison's hypercortisolaemia, secondary or chronic hyperadrenocorticism, Addison's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placent weak pains and atonic bleeding, before and after expulsion of placent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                as drugs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
     This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the Sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator, bits ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hyperglyceridaemia, cc hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC acute myocardial infarction, infertility, spinocerebeliar degeneration, CC acute myocardial infarction, infertility, spinocerebeliar degeneration, CC clapable of altering the binding activity of the ligand affecting CC activation of the C morrein-compade receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Loc

                                                                                                                                                                                         The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypoovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing contributions approaches the secretion can be used for treating or preventing secretion as a secondarious the secretion of the secretion o
                     pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune discase prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommeal syndrome, argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy

senile dementia, cerebrovascular dementia, and dementia associated with: genealogical disorders (e.g. Alzheimer's disease, Parkinson's disease, Pitt's disease, Huntington's diseases), infectious diseases (e.g. Creutzfeldt-Jakob's), endocrine or metabolic disease or intoxication by drugs, metal and organic compounds), tumourlgenic diseases (e.g. brain tumour), traumatic diseases (e.g. chronic subarachnoidal heamorrhage, and other types of dementia, depression, hyperactive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of diseases associated with prolactin hypo and hypersecretion conditions hyperactively, including: hyperprolactinaemia, pituitary adenoma, breast cancer, infertility, impotence and autocimmune disease (hypersecretion disorders), and seminal vesicle hypoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of the human pituitary G protein-coupled receptor ligand 1972L. A method suitable for commercial high-level production of 1972L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. with human basic fibroblast growth factor (see AAV83796-97) that has been modified to include an N-terminal cysteine residue. The ligand is released from the fusion by cyanylation followed by ligand is released from the fusion by cyanylation and (at high doses) prolactin secretion-inhibiting properties. It can be used in the treatment and prevention of various diseases including:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing a 19P2 pituitary G protein receptor ligand of a fusion protein, useful for preventing and treating breast cancer, renal failure and autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1999-047884/05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-DEC-1998.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19P2 ligand; G protein coupled receptor; pituitary;
